

People with Parkinson's Disease Are Needed!

Purpose:

- The main goal of this research study is to develop and characterize several new methods to detect and measure brain inflammation in Parkinson's disease (PD).

Participation includes:

- One study visit (~7 hours)
- 60 minute MRI scan
- Lumbar puncture
- Blood draw
- Cognitive/motor assessments
- \$200 reimbursement for time and travel

What we are looking for:

- Participants must have diagnosis of PD
- Participants must be 50 years old or older
- Participants must not have any other neurologic illness
- Participants must not have history of chronic anti-inflammatory drugs
